a min or two to join**

LESSON ROADMAP

MEF MODULE 1 DAY 5: JWTs and Authenticating APIs

Schedule	
9:00–9:15 am	Welcome and Warm-Up
9:15–10:00 am	JSON Web Tokens
10:00–12:30 am	Authentication with JWTs Walkthrough
12:30–1:30 pm	Lunch
1:30–2:30 pm	Related Models: Users and To Dos
2:30 - 4:50 pm	Express API Review and Working Session
4:50–5:00 pm	Bring It Home

LEARNING OBJECTIVES

1

Identify the use case for JSON Web Tokens when securing a microservices API

2

Send requests and parse responses encrypted with JSON Web Tokens

3

Understand how JWTs enable authentication and authorization in an Express API

4

Protect routes in an Express API based on tokens

Modern Engineering

Security with JSON Web Tokens

Recap: Authentication and Authorization

Authentication

You are who you say you are.

Including a header in HTTP requests.

VS.

Authorization

You are permitted to perform this operation.

Including role fields in the user database and "user" fields to track owners of data.

Guided Walk-Through: Auth with JWT

Let's hop over to GitHub to dig deeper into a popular, lightweight approach to authentication/authorization - JSON Web Tokens.

Modern Engineering

Express JWT Authentication

Lunch Break

Let's add a Users table to our To-Do App and associate users with given to-do items.

[We'll follow the steps outlined in this git repository.](#)

Solo Exercise:

Adding Users to Your App

90 minutes

Let's practice this relationship pattern by adding a similar users table to your own Express API.

As a bonus, you could beef up the authentication and add a login route that returns a JWT on successful matching of a username and password. This JWT would be included in the user's future HTTP requests as a header, and your express app would decode this token for any routes requiring an authenticated user.

To wrap up this section of the course, let's use the remaining time to review what we've done so far, provide answers to any questions you have, and demonstrate any bonus authentication features we have time for!

We won't be requiring authentication in future applications during this course, but it's a great bonus feature to consider once you've reached minimum requirements on future projects!

Solo Exercise: Daily Exit Ticket

3 minutes

- Please take a moment to give us your feedback after today's course!
